

Development permit to be cancelled

During the last 12 years it became common for the municipality of Constanta to approve many projects that are against the law dedicated to Costal Zone Management.

The same case was with a plan for a part of the Constanta cliff were the owners planned and obtained approval for a construction. Taking into consideration the huge problems that Romanian cliff is facing in Constanta but also in other areas (ex. Eforie) and the fact that this plan was totally against the law Mare Nostrum decided to make the necessary steps in order to obtain the cancellation of this project. So we sent petitions to the Environment Protection Agency, the Prefecture and the Construction Inspectorate in Constanta asking to stop this project and to apply the law in it's spirit and words.

Having the support of the local community (also a group of citizens in the area) we succeeded to determine the local Construction Inspectorate to formally ask the Environment Protection Agency to cancel the environment permit.
